

A VIAL FOR YOUR YOUTH

**BIOCARE**MED

# WHAT IS ADMSCS-EXOS?

Exosomes from Adipose-Derived Mesenchymal Stem Cells offer a promising and safe approach due to higher biocompatibility and accessibility. These exosomes have the ability to circulate in the body for extended periods with higher penetration ability. In combination, they promote strengthening the activity of fibroblasts.

Fibroblasts represent the major skin type in the dermis, where they have a key role in producing and maintaining the extracellular connective tissue that is crucial to maintaining the youthful appearance of skin.

Opting for the highest safety and efficacy ratio, our production pipeline allows us to ensure the utmost safety by selecting the youngest and healthiest donors, guaranteeing the quality and consistency of our exosomes.

# Concept Exo S

Skin-Focused  
100mg / 1vial

Add 3ml-5ml of saline into the vial of lyophilized powder and mix thoroughly.

Cleanse the skin and dry it completely.

Apply Autocell on the skin immediately after mixing and use microneedling and post-laser treatment.

# Concept Exo H

Scalp-Focused  
100mg / 1vial

Add 5-3ml of saline into the vial of lyophilized powder and mix thoroughly.

Cleanse the scalp and dry it completely.

Apply Exosome H on the scalp immediately after mixing and use microneedling.

Exosomes help your cells maintain their vitality,  
resulting in a visibly more youthful and radiant look.
